Water monitoring taken in the Animas River near Durango, CO on August 14, 2015. (Credit: Eric Vance/EPA)

The Gold King Mine entrance area is shown on August 14, 2015. (Credit: Eric Vance/EPA)

As water exits the mine, it flows into a system of four treatment ponds. The treatment ponds provide retention time to allow the pH to adjust. Here, lime is added to a settling pond to assist in the pH adjustment of the water prior to discharge to Cement Creek on Aug 14, 2015. (Credit: Eric Vance/EPA)

Settling ponds used to precipitate iron oxide and other suspended materials from nearby Red and Bonita mines drainage are shown in this Aug. 14 photo. (Credit: Eric Vance/EPA)

I've got it Jeff. I'll cross check with the live page to make sure I get the final approved captions.

this looks good to me!

Adding Jess so she has access to the photos and captions for SM

Subject: slideshow - can we post ASAP?

Hi guys - not sure which of you is posting to the site right now. We got clearance to produce a slideshow of Eric's photos from yesterday. We'd like to create a slideshow similar to the one that's up of the Administrator's visit. Can we do that with the below photos in the same order? Captions to be used are below. Do **NOT** use the captions on the photo site.

The site is password protected -

Password:

(case sensitive)

We would like to send this out to reporters and news producers once it's up. Can you let me know when it's live?

Thanks!

-Dan
